E-FUEL has established an innovative program for customers who are (1) able to obtain and supply their own feedstock(s), and/or (2) want to evaluate E-FUEL's technology specific to your individual needs to establish a proof-of-concept and determine applicability to your business model. The program brings to bear E-FUEL's deep knowledge and intellectual property in the areas of feedstock processing, waste disposal, optimal distillation algorithms, and micro control systems. Core to the "Ethanol Producer Service Kit" program is that we offer this consulting on-site at your location. This ensures direct hands-on experience and training by an E-FUEL ethanol consultant with your team. Knowledge is imparted with specifics on how the system will perform based on your criteria. The kit includes:

- 1 MicroFueller™ (MFC200-001) distillation closet and integrated pumping station.
- 1 Organic Fuel Tank (MFT200-001) with fermentation capability for feedstock processing.
- Installation support for MFC200-001 and MFT200-001.
- Site preparation consulting.
- 5 days of on-site technical support and training by a senior E-Fuel consultant to expertly advise, review and adjust processes to fit the needs of your business.
- Hook-up to the E-FUEL Global Network (EGN) for 24x7 remote monitoring of the MicroFueller system operation, software updates, and process adjustments in real time (refer to the [EGN Data Sheet](#)).
- EGN connects through the internet* using Wi-Fi or hard wire interface (optional data cell or satellite). See the [E-Fuel Global Network Subscriber Agreement](#) for details.
